6204 Wide Format Solution

Notice

This document describes the locations, capacities and contents of volatile and non-volatile memory devices within the 6204 Wide Format Solution.

The context of the information in this document is that normal means of access or data extraction are being attempted in order to reproduce, read, or extract stored or latent data. This does not include attempts to reproduce, read or extract data or reverse engineer storage methods by individuals or organizations with advanced skills or through the use of extraordinary resources and measures or specialty equipment not normally available in the industry or to the public.

The content of this document is provided for information purposes only. Performance of the products referenced herein is exclusively subject to the applicable Xerox Corporation terms and conditions of sale and/or lease. Nothing stated in this document constitutes the establishment of any additional agreement or binding obligations between Xerox Corporation and any third party.

Statement of Volatility
6204 Wide Format Solution

Introduction

The 6204 Wide Format Solution is used to perform the following tasks:

- Printing
- Copying
- Scanning

This document describes the amounts and types of memory contained in the device in an easy to read tabular format. To allow security issues to be addressed as needed, specific commentary has been included about job data and where Personally Identifiable Information (PII) can be found in the system.

The information contained in this document has been verified at the time the product is released for sale. Manufacturing process changes may require that memory amounts are increased but, the purpose or contents of the memory should not change.

General Memory Information

Volatile Memory

- All volatile memory listed is cleared after power is removed (decay occurs generally within 20 seconds at room temperature).
- All volatile memory listed is required for normal system operation and during service and diagnostic procedures.
- Removal of any volatile memory will void the warranty.

Non-Volatile Memory

- All non-volatile memory listed is required for normal system operation and during service and diagnostic procedures.
- Removal of any non-volatile memory will void the warranty.
- None of the non-volatile memory in the system can be accessed by accidental keystrokes.

Additional Information:				
All memory listed above contains code for execution and configuration information. No user or job data is stored in these locations.				

Hard Disk Descriptions

Complete this table if the device has media storage capability

Drive / Partition (System, Image):	Removable Y / N	Size:	User Modifiable: Y / N	Function:	Process to Clear:
System Disk	No	160 GB	N with normal operation	Operating System, Fonts, configuration file storage	None unless optional Image Overwrite is installed.

Additional Information:

This FreeFlow Accxes Print Server system disk contains the Operating System and stores executables, fonts, settings files, print job files, and scan to net mailboxes.

The Image Disk stores images in a proprietary encoded format in non-contiguous blocks. User data and image data may be completely erased if optional Disk Overwrite kit is installed and enabled. This option utilizes a three-pass algorithm which conforms to U.S. Department of Defense Directive 5200.28-M.

NOTE: For even greater security, Xerox provides a "Removable Hard Drive (RHD) option.

Media and Storage Descriptions

Type (disk drives, tape drives, CF/SD/XD memory cards, etc.):	Removable Y / N	Size:	User Modifiable: Y / N	Function:	Process to Clear:
DVD Drive	N	4.7 GB	N	Loading software	None

Additional Information:

RF / RFID Information

Additional Information:

USB Port(s)

Complete an entry for each USB port

USB port and location	Purpose
Accxes Print Server (8 USB 2.0)	Three ports are required to connect scanner, and printer (2). User devices connected to other ports will not be recognized.

Additional Information:

A customer service engineer has the ability through a diagnostic routine to backup system configuration data only to a USB flash device.
